

**COUNT THEM ALL!!**

On 28-Aug-2021, Saturday, the members of the Math club belonging to classes VI& VII met virtually along with the teachers, Mrs Krithika Ganesh, Mrs Anuradha, Mrs Rakhee and Mrs Akila Janani.

The meeting started with a prayer. The children were then showed a few figures containing numerous squares and they were asked to count the total number of squares in them.

The children started counting – a few gave the correct answer, some were not convinced of the correct answer, some were bewildered by the number of squares in all. Then, the students were explained the method to find the number of squares in a grid containing the same number of rows and columns and similarly with different number of rows and columns. The concept was extended to a few more complex figures.

All the members were engrossed in counting the squares in the various figures. Some enthusiasts even provided their own figures for which the others applied the technique and found the correct answer. A few pictures of the figures discussed during the club meeting are shown below.
